CORSICANA, TEXAS

Jan 9, 1937.

16 Months Old From Nut
Bearing 4 Months After Budding

Mr. C.A. Reed, Associate Romologist,
Washington, D. C.

Dear Mr. Reed:

Re: Your letter of Jan. 5, 1937 in answer to my
postal of Dec. 24, 1936.

I have written an article or two for some of the farm magazines in regard to growing Improved Black Walnuts for timber and nuts. Our local Chamber of Commerce has been asked a number of times to furnish my name and address as I have usually signed my address as Navarro County, Texas only.

Because of the interest I find in the walnut I would like to be listed in your 'Partial List of Nursery Firms Listing Northern Nut Trees' also any other listing you might make.

I carry all varieties of budded pecans, also native pecan trees and nut for sale. I specialize in the Thomas Black Walnut, also carry the Wilson Wonder English Walnut, also native walnut trees for sale. My specialty is the Thomas Black Walnut in all size trees, both grafted and budded.

I have made a very good study of it on many types of soils, also have sent trees to numerous widely scattered parts of Texas to be tried, including the Texas Experiment station in the Rio Grande Valley.

Thanking you I am,

Very truly yours,

R. M. Cooksey

Any information you can give me at any time on this subject will be very much appreciated.
